

Optimise Today's Systems for Tomorrow's Demands

BMS UPGRADES

Ensure your BMS is fit for purpose

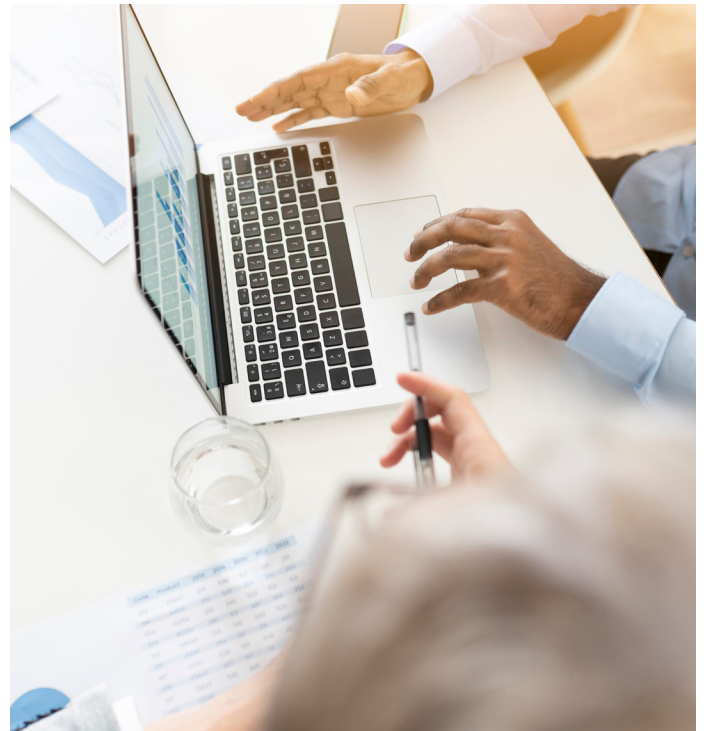

An effective Building Management System (BMS) is essential to ensure your buildings can operate efficiently and provide a comfortable and suitable internal environment. However, advances in technology mean that elements of the BMS are often obsolete after 10 to 15 years, with support no longer provided by the manufacturer. When systems reach the end of their lifespan, failures in the system can occur, leading to increased energy usage, inconvenience for occupants and even increased risks for the building.

We are forward thinking

At ABEC, we can help to manage this process and make BMS upgrades more cost effective and less disruptive with forward maintenance and lifecycle planning. We do this by understanding the exact requirements of each building, both now and in the future, and working with you to carefully evaluate the options and choose the right solution.

We are award winning

We are proud to have been recognised many times for our design, installation and service expertise with the BCIA Award for Building Controls & BEMS Installer of the Year being among the most recent.

ABEC holds system house status with many mainstream BMS manufacturers including

We are subject matter experts

For almost two decades ABEC has been at the forefront of Building and Energy Management Systems (BEMS). We draw on this wealth of experience for every project to deliver the expertise and guidance that customers require.

We manage risk

If the BMS or components of the BMS fail, you risk downtime and loss of services. Planned upgrades ensure smooth delivery and continuity of HVAC services in critical and non-critical areas.

We are committed

We strive to complete BMS upgrades in a safe, professional and cost-effective manner and our engineering teams have the skills and resources required to successfully manage an upgrade in a 'live environment'.

To minimise disruption and risk, we develop migration strategies to identify the important areas and prioritise lifecycle plans based on criticality.

We always have energy in mind

Our knowledge means we can also help optimise the operation of your building and use the upgrade as an opportunity to improve energy performance. Our BMS Energy Audit provides a list of energy saving initiatives and how much energy can be saved. This typically delivers 15-20% savings and a ROI in approximately 12 months. These long-term savings can also help to offset the cost of the upgrade.

We are your trusted partner

We are the preferred supplier of BMS, Energy and Smart Buildings for some of the UK's largest Blue-Chip corporations and facilities management companies. We operate in the UK, Europe and the Middle East, with a global partner network.

Why choose ABEC?

- ✓ Over two decades of specialist BMS experience
- ✓ We minimise disruption from BMS upgrades with lifecycle planning and migration strategies
- ✓ Trusted BMS partner for companies around the world
- ✓ We are system agnostic and always offer the best product to suit the client's needs
- ✓ Our BMS Energy Audit is an optional extra with any upgrade that delivers significant energy savings offsetting project costs
- ✓ Global reach with dedicated local support
